multimodal logistics for a resource-efficient and low energy transport (EC, 2013b). To meet the requirements for a seamless multimodal transport system, new technical solutions are promoted for infrastructure and vehicles (EIRAC, 2010).

Thematic Research Summary: Multimodal transport

Multimodal transport (also known as combined transport) is the transportation of goods under a single contract, but performed with at least two different means of transport; the carrier is liable (in a legal sense) for the entire carriage, even though it is performed by several different modes of transport (by rail, sea and road, for example). The carrier does not have to possess all the means of transport, and in practice usually does not; the carriage is often performed by sub-carriers ...
