In order to improve the efficiency of the diesel engine and reduce emissions, an improved heat transfer model was developed in an AVL-BOOST environment which is a powerful and user-friendly software for engine steady-state and transient performance analysis. The improved heat transfer model considers the advantages of the Moschni1978 heat transfer model and Honhenberg heat transfer model.

Cylinder pressure measurements play the key role in any engine indicating and combustion analysis work, but since modern engine research requires more than peak cylinder pressure to be measured against crank angle, pressure transducers are also made for the following roles in engine indicating work: Cylinder pressure for R&D work, optimized for precision of measurement.

For proper torch operation, you need a proper mixture. Causes of Lean Failures. When you think of lean as meaning not enough fuel for the amount of air, you start with the concept that the amount of air is correct. Here are some common causes of this condition: Low fuel volume or pressure due to feed or supply pump, main pump, high-pressure GDI pump faults. One frequently misdiagnosed problem ...
