Until the 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.. A vector space over a field  $F$  (often the field of the real

In mathematics, a matrix (plural matrices) is a rectangular array or table of numbers, symbols, or expressions, arranged in rows and columns. For example, the dimension of the matrix below is  $2 \times 3$  (read "two by three"), because there are two rows and three columns:  $\begin{bmatrix} - & - \\ - & - \end{bmatrix}$ . Provided that they have the same size (each matrix has the same number of rows and the same number of columns as the ...
